

Achieve higher operating profit margins, quality and more product

Powerful
Paradox
Optimization
System™

Oil and Gas Operations

Paradox is a
self-contained
Optimization Software Engine and Platform

Paradox increases
productivity, quality,
and optimizes efficiency,
resulting in increased profit
margins and lower costs

- *A Typical 10-25% Increased Productivity & Efficiency*
- *Increase Operating Profit Margins & EBITDA*
- *Reduce Manufacturing Costs*
- *Improve Product Quality*
- *Reduce Waste*
- *Eliminate Process Variability*
- *Reduce Overall Costs*

How a major company did it in 6 simple steps using the powerful POSy System™ (Paradox Optimization System)

The Paradox Optimization System™ focuses on

Customer Key Performance Requirements

By using our proprietary

6-Step Process

you can increase productivity and efficiency

Testimonial: Major Pharmaceutical Company

"I have used your Paradox software engine on a tool that has been in production for over a year. I have had a **huge reduction in cycle time by 20%**.

"This software is user friendly compared to the software I have used in the past. The results are quick and easy. The QA Department has accepted the changes a lot faster, since there is a full report once trials have been completed. It was easier for my management staff to see the results rather than me trying to explain the changes to process. Thanks"

**Powerful
Paradox
Optimization
System™**

Achieve higher operating profit margins, quality and efficiency

Oil and Gas Operations

After completing the simple **6-Step Process** the **POSy System™ (Paradox Optimization System)** does the rest—recommending specific **Optimized Processing—Set Points** to meet your performance requirements!¹

Our Goal is to Optimize the Following Key Items:

Be positive and in the black with our POSy System.
